

entangle yourself in a naturally occurring process

COURSE

create a window

CONTINUUM

set something into motion beyond your control

AGENCY

work is being done all around us, all the time
cells are growing and dividing
material is breaking down
energy is being re-purposed

INTELLIGENCE

purposefully involve yourself in an automatic process

JOURNEY

the very air we breath
fluctuates in temperature, humidity,
density and composition every moment

FORCE

removing the human centred view of creation

PERPETUAL

it can be delayed
it can't be rushed
in fact, its better if neglected

FORM

something that is possible

CONTINUANCE

our own time-line is overlapping
with billions of biological processes
happening all around us
all the time

OBSERVE

there are over 2,500 insects that
live no longer than 24 hours
a Greenland shark was found to be 512 years old

SUCCESSION

bearing witness to the surprising, unexpected
processes that happen without our intrusion,
outside of our control

PROCEEDING

observing the effects of time, weather,
moisture, wind, humidity over time

PROCESS

this is a way of observing our ideas about work
what is work and how we should be engaging in it

PACE

this is a choice,
to feel value in something
you might normally feel guilt

EXPERIENCE

initiate a scenario through which you can view time

DISCOVERIES

a project about process

PERPETUATION
